We also found the settings confusing despite reading the instructions and time is wasted getting the metronome to work as wanted. It would have been useful to have a back light or at least something for clarity. There is a headphone socket so that the beat can be heard along with an indication light if needed but overall we gave up and deemed there must be a better product on the market. Useful size that can be clipped to a belt but concluded its return. Feels plasticky not quality, the sort of product that could possibly be found as a generic product with several different brand names stuck on it. We will look for something more substantial. It sounds like the late 70s ping pong game. Send report Total features handling quality Good metronome, also for drummers 31.01.2015 I wanted a metronome that was precise, had a sound that would not annoy me, had some settings for its volume and a headphone output. Differently from the Korg metronome I had before, when you press up or down on the tempo, this starts to quickly change immediately, and not in increments of 20 but increments of one. Very quick to set the tempo. Even better, there is a very responsive tap tempo function. Also has lots of other features that you would not expect seeing how little buttons it has, it is actually quick to set up and good for practice on any instrument.

Send report Total features handling quality Perfect app alternative George XT, 28.02.2019 Excellent standalone metronome, considering the price. Does what it is supposed to do very easily, with no weird button combinations. Its compact and lightweight so you can keep it in a stickbag or a guitar case at all

times. http://www.jangrootmuziek.nl/files/craftsman-19_5-hp-lawn-tractor-owner-manual.xml

For drummers, the headphone output is loud enough for playing along and the tone generator is actually pretty useful if you re tuning your drums to a specific pitch. When muted, 2 red LEDs on top keep counting the meters which is handy in certain situations. For some players, the 250 bpm ceiling might be annoying if you re trying to practice certain patterns but the beat variations and note values are really enough for most people, clave patterns are a nice addition too. My only gripe is that the metronome has to stop in order to use the tap tempo function but its really not a deal breaker.

Send report Total features handling quality Boss DB 30 Paullimerick, 28.08.2013 Nice and small, comes with battery fitted. Ready to use from box. Can be used as a metronome and for giving pitch. Useful for choir conductors. You can tap in pulse manually and it will give you a metronome value. Headphones can be plugged into the metronome if you dont want others to hear, visually lights and a digital pendulum help to illustrate the pulse if on silent. If you have a coin you can place this into the slot at the back of the db30 and this will allow it to stand upright. The machine learned model takes into account factors including the age of a review, helpfulness votes by customers and whether the reviews are from verified purchases. Please try again later. Poucegirl 4.0 out of 5 stars The tap feature is very useful. The instructions came in Chinese. Japanese only. I was able to find the Owners Manual in English online. The instructions are very brief a more detailed instruction manual would be very helpful. And, it comes WITHOUT a power supply which needs to be purchased separately. Batteries are only good for 5 6 hours.Javais alloue 4 etoiles. Je passe de 4 a 2 etoiles apres environ un an et demie dutilisation. Cest un outil de travail, pas un jouet. Et cet outil nest pas fiable. Jinstalle une pile neuve et ca ne change rien. Tres decu de cet appareil.

Jai deja eu un autre metronome Boss Dr Beat DB12. Il a ete tres fiable pendant plusieurs annees. Mais ce DB30 na pas ete un bon achat. Mon prochain metronome ne sera pas un Boss. Easy to use, volume control very usefull when you plug ear phones in. That was my first evaluation before using

it a certain time. I gave it 4 stars at the time. Now I drop to 2 stars after using it for a year and a half. This is a tool, not a toy. I use it for my work as a musician. And this tool is not reliable. I put a brand new battery in it, and nothing changes. Very disappointed with this DB30. The next metronome I buy will not be a Boss. The tones are a little high pitched for me quite digital di do di do type sound. I prefer the wood block sounds available on the db90. So I will eventually upgrade. Perfect size for a stick bag. And great functions for practice. I haven't pushed it to its limits yet. Good subdivision applicability. Well worth the price for its functionality. Would recommend. Impossible to save presets. People have mentioned this. Be warned. Malheureusement, on ne peut garder que huit tempos en mémoire. C'est insuffisant pour un concert. Most pianists tend to prefer the classic wooden windup variety, and having listened to the sounds that are produced by most of the cheaper electronic metronomes out there, I can understand why. Instead of producing cheapsounding digital beeps, the DB90 actually plays back recorded samples of a traditional wooden metronome. The traditional metronome pendulum is also simulated on the LCD screen via a series of lines that give the illusion of a moving pendulum, whilst two red LEDs just above the screen flash in time with the beat. In spite of looking quite complicated, the DB90 is actually very easy to operate. Now you can have some fun with the sliders. The first slider controls the volume of the bell; the second slider controls the volume of the beat; and the next three sliders allow you to sound eighth notes, sixteenth notes and triplets.

You'll probably not want to use these very much, but they're there if you ever need them. The last slider is the overall volume control. This metronome has plenty of volume to it, so if you're playing a digital piano, you'll probably be only using 30% volume. The backlight will now remain on until you switch the unit off. You can do this any time you like without worrying about losing your rhythm settings, because everything is saved to memory automatically. In terms of connectivity, the DB90 has it all. There are also some input sockets, including a MIDI in, although this probably goes beyond what most people will actually use. Once you've started using this metronome as part of your daily music practice, you'll probably want to buy a power supply for it, because it chews through batteries quite quickly. Only three small negatives 1 Roland wired this metronome to switch seamlessly to using battery power in the event of a cable disconnection or a power failure. Whilst I can understand why they have done this, it also means that if you connect your DB90 to an external power supply, and then you forget to turn your power supply on, the unit will continue to operate normally, but using battery power instead. This feature might result in you going through more batteries than you intended. 2 The metronome has 50 user memories so that you can save and recall your favourite rhythms. However, when you change the battery, all your user memories get reset, and there is no way of backing up your data. 3 The pullout plastic stand at the back of the unit feels a bit flimsy. When deciding which metronome is right for you, certain challenging questions will need to be asked. Is it really worth paying 105 for a complicated-looking digital metronome that requires its own separate power supply when you can buy a traditional wood effect windup one complete with bell for under 30 I wrestled with this dilemma myself, and I chose to go digital.

Your choice might be different to mine, but the most important thing is to buy a metronome that you can live with, and which makes your daily music practice a more enjoyable experience. Sorry, we failed to record your vote. Please try again Very handy when it all seems too busy. Cons Far too extensive but it is a large format and I know of no other large format metronomes. The inbuilt stand to angle the unit at 70 degrees from the desk is appallingly flimsy and will collapse as soon as you go near the buttons. I am personally going to design and 3D print a better solution but not everyone has that luxury. Would I buy it again in hindsight Yes. There is no alternative for a larger format machine with a lot of features including MIDI sync etc. Sorry, we failed to record your vote. Please try again The missus rejected it as a present due to its limitations, so she kept the one she had on permanent loan from me and I ended up with this boss one. It's fine for me but not for my OH. The build quality is not as good as boss pedals and it has no in built stand but it's fine for me. Sorry, we failed to record

your vote. Please try again The backlight makes the screen a lot easier to read when setting. Sorry, we failed to record your vote. Please try again The battery lasts 6 hrs. Pointless. So please be aware, you need to order the power cable separately. Personally, I'm not impressed! Sorry, we failed to record your vote. Please try again Can't be beaten. For playing guitar this is terrific. Very versatile and with the ability to use ear plugs is fantastic for looping. Let's face it. Metronomes are for practice. This is everything you would need. Sorry, we failed to record your vote. Please try again Very helpful. Sorry, we failed to record your vote. Please try again I like so much its natural metronome sound, its jog dial. Do not use battery but plug charger but agree the battery runs out very quickly.

Only complaint is after it is unplugged and then plugged back or if electricity goes away, when powered back on, the meters have to be moved up or down otherwise they sound at top level even though they are at the lowest. I kept the stars at 5 because I believe these little faults are not enough to wipe one. Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again Everyone has commented and said it's a perfect piece of kit. The only downside for me is that you can only store 8 tempos. For set lists longer than 8 tracks it becomes tricky to navigate and get to the right tempo in time. Sorry, we failed to record your vote. Please try again Really handy. Sorry, we failed to record your vote. Please try again. Please try again. Please try again. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. 3rd Day Believer 3.0 out of 5 stars Metronome is LOUD, which was my main want. That shouldn't be hard to find, but is. It has the option of TOCK sound and HUMAN VOICE sorry for the caps, but this is what people are searching for, even if you go to the online forums. The problem with many metronomes, is they sound two different tones, like C and G, and by God I hear C and G, which is most distracting. I want dead, nonmusical sounds. The DB90 has these. So great. The bad news BUILD QUALITY IS ABYSMAL. I mean really, the housing is tackier than any toy, and the little foldout stand in the back feels like it'll snap in a light breeze. This is not even remotely the build we expect in an implement of this kind. The cheapest guitar tuner has a better housing than this. If you drop this on a hardwood floor twice, I bet it just dies. Finally, I already have a Boss adapter, and—given the many, many comments on how many batteries this eats even the maker says it works for only a few hours per battery—the adapter is a must. Just astonishingly crummy, given that this is the “The most advanced metronome available.” I owned this same model of Dr Beat for around a decade beginning in 2002 and had no problems. I practiced with it constantly and even dropped it several times with no issues. When I lost it on a plane I hesitated to buy another one of these metronomes because of the cost there are other brands now for much less that include all the functions I need. But, years later, I took the plunge. I was a little wary of how flimsy the stand was, and I just kept it on my desk to practice with at home because it's too heavy to lug around. One day the stand popped out while I was using it, and the metronome no longer turns on, just emits a fuzzy

sound while the battery is plugged in.

Tried changing the battery to no avail. Emailing BOSS for support and hope they come through. Anyway, this is WAY too fragile of a product for something that people need to be able to futz with and press buttons on regularly. This thing smokes those apps in versatility. I really like how I can now mix in the triplets at the volume I need and I also love all the jack in and outputs one could imagine needing. The only reason I gave it 4 stars is because the speaker could use an upgrade and the if I run audio through it the sound is significantly worse. Boss, please update the technology and this product will be absolutely perfect. The speaker is louder than every metronome I've used. Cons using the headphones there is a lot of noise. I used it as an insert on my Behringer board and no matter what power source, patch cable or direct headphones, the unit is noisy. It's not noticeable with the onboard speaker but it's a lot when using it plugged in. Plus the metronome voices sound horrible when plugged in. I use a Roland TD50 VDrum brain and route its onboard click to a direct out port in back then insert it into my board. Very expensive metronome that could have better sounds. I have gone thru at least 9 different metronomes in the past 10 years. The KLIQ was nice until it lost its mind before the year was up. I own a few Korg TM50 units and they are real good, but they are a little too quiet for my purpose pipe organs are loud. This is the first time I have tried any of the Boss metronomes and was very immediately impressed with the functionality of it. If there was a higher grading than 5 I would have given this more than five stars. What I like about the Boss DB60 Ease of use. I love the actual sound, it is more of a old wooden tock instead of a digital ping. I can instantly add or change half beats or third beats on the fly and give them different volumes.

There is nothing to like about this DB60, and if and when it breaks I am very hard on equipment I will buy another Boss DB60. I have finally found a metronome I really like after 50 years in the business. Neither the seller nor Amazon will do anything to help me with the exception of referring me to the manufacturer. Very bad business not to stand behind your product. Do not order!!! It seems like a lot of the features would be most useful for drum practice, but the basic features are useful for practicing any instrument. Also, the more complex features approach those of a drum machine, so you can use it to simulate playing to a more realistic drumbeat. See the user-supplied images for how to add the optional footswitches. They make it very easy to turn the unit on and off, and cycle through presets that you have programmed in. You can get an English version from Boss's website. However, in any language it is pretty brief. For a unit this complex, longer instructions with some examples would help users get more out of it. Note I have not done a web search; there may be tips available in forums, blogs, etc. Most pianists tend to prefer the classic wooden windup variety, and having listened to the sounds that are produced by most of the cheaper electronic metronomes out there, I can understand why. Instead of producing cheapsounding digital beeps, the DB90 actually plays back recorded samples of a traditional wooden metronome. Stay up to date with Roland news, artists, promotions, events, and more. Provides an overview of key features, functions and operational tips. The Roland Worldwide Social Network keeps you connected to the latest products, exciting events, and much more. Kit configuration 10inch snare, two 8inch rack toms, 10inch floor tom, 12inch hihat, two 12inch crash cymbals, and 13inch ride cymbal. Kit configuration 10inch snare, two 6.5inch rack toms, 8inch floor tom, 12inch hihat, 12inch crash cymbal, and 13inch ride cymbal.

You must have JavaScript enabled in your browser to utilize the functionality of this website. You will also find a helpful Tap Tempo feature for finding the right pulse fast, 12 semitones of internal reference tones to opt from, an Auto Power Off to help you elongate battery life and of course, a headphones jack socket so you can plug the pulse directly into your cochleas!
